Subject: Aurora power increase for Central Otago users

To whom it may concern,

Please be aware that this issue is now years old and now coming to a head because the DCC over spent on a stadium, bad investments, e.g. buying lands for development and selling the same at a loss.

I personally think the DCC should be taken to task on this and should be made to find the money to fix this problem with Aurora, by using the money it received from the sale of it's own electricity entity e.g. Waipori Power Station.

This continued bleeding of the rate payer in this country has to stop now.

Councils must learn to work with the money they have, not what they think they can get in the future.

We are in a very different world now and money is going to be harder to find for the average rate payer.

Yours sincerely
