

**NOTICE SEEKING CLEARANCE OF A BUSINESS ACQUISITION PURSUANT TO SECTION  
66 OF THE COMMERCE ACT 1986**

**3 May 2021**

The Registrar  
Business Acquisitions and Authorisations  
Commerce Commission  
PO Box 2351  
Wellington

Pursuant to s66(1) of the Commerce Act 1986 notice is hereby given seeking **clearance** of a proposed business acquisition.

**MinterEllisonRuddWatts**

## 1. EXECUTIVE SUMMARY

- 1.1 Dunlop Drymix Limited (**Dunlop**), seeks clearance to acquire the assets and business of Drymix N.Z. Limited (in receivership and liquidation), Drymix Cement Limited (in receivership and in liquidation), Drymix Bitumen Limited (in receivership), Drymix Imports Limited (in receivership), XNP Limited (in receivership) and Romex N.Z. Limited (in receivership) (together, **Drymix**) (the **Proposed Transaction**).
- 1.2 Dunlop is a wholly owned subsidiary of Concrete Group Limited (**Concrete Group**). Drymix and another wholly owned subsidiary of Concrete Group, Cemix Products Limited (**Cemix**) manufacture and distribute bagged concrete and asphalt products in New Zealand. The core overlap is the manufacture and distribution of bagged concrete and mortar.
- 1.3 Bagged concrete is a dry powder made up of sand, cement and aggregate premixed in a bag. Users add water on site and transform the powder into concrete. Bagged mortar is a mixture of sand and cement.
- 1.4 The product is designed for DIY and simple projects where only small amounts of concrete are needed. It is typically sold in 20kg bags and supplied to the large building product retailers (Bunnings, Carters, ITM, Farmlands, Mico, Mitre 10 and Placemakers), hardware stores, plumbing merchants, landscape yards and garden centres.
- 1.5 The Proposed Transaction is unlikely to have the effect of substantially lessening competition in the bagged concrete and mortars market or any related market in New Zealand because:
  - (a) large retailers will continue to wield a considerable degree of countervailing power and impose a significant competitive constraint on the merged entity;
  - (b) there will continue to be significant competitive constraint from the market leader Firth Industries, and smaller regional suppliers;
  - (c) substitute concrete and mortar products will continue to provide a substantial constraint on the merged entity;
  - (d) barriers to entry and expansion in the national market for the manufacture of bagged concrete and mortar are low; and
  - (e) the Proposed Transaction will not result in any coordinated effects given, inter alia, the countervailing power of customers, the competitive constraint posed by substitute products and the low barriers to entry.

## 2. APPLICANT AND OTHER PARTIES

### The Applicant

- 2.1 This notice seeking clearance is given by Dunlop Drymix Limited.
- 2.2 Contact details for Dunlop Drymix Limited are:

Postal address: 19 Alfred Street, Onehunga, Auckland 1061, New Zealand

Physical address: 19 Alfred Street, Onehunga, Auckland 1061, New Zealand

Telephone: 021 531 212

Web address: Dunlop is not currently trading so does not have a web address.

Contact person: Bhavdeep Dhillon, Director

[bhav.dhillon@cemix.co.nz](mailto:bhav.dhillon@cemix.co.nz)

2.3 Dunlop Drymix Limited is not currently trading and has been set up as a special purpose vehicle for this transaction. It is a wholly owned subsidiary of Concrete Group Limited which is ultimately owned by Ardex Australia Pty Limited (which has a 70% shareholding) and Concrete Trustee Limited (which has a 30% shareholding).

2.4 Ardex Australia Pty Limited offers engineering products and systems in the areas of floor levelling and adhesives, tile and natural stone systems, sheet and liquid applied waterproofing membranes, general construction and decorative surfaces. Concrete Group is a New Zealand company, based in Onehunga, Auckland, and is part of the chemical manufacturing industry. A diagram showing the ownership structure of Dunlop is set out below:

2.5 The company relevant to the assessment of the Proposed Transaction is Cemix, which is a wholly owned subsidiary of Concrete Group. Cemix manufactures and distributes bagged concrete, mortar and asphalt products.

2.6 All correspondence and notices in respect of this application should be directed in the first instance to:

Minter Ellison Rudd Watts  
PwC Tower  
15 Customs Street West  
Auckland 1143

Dr Ross Patterson  
Partner

[james.craig@simpsongrierson.com](mailto:james.craig@simpsongrierson.com)

**3. TRANSACTION DETAILS**

**The proposed transaction**

- 3.1 Dunlop has entered into an agreement for sale and purchase following a contested process to acquire the Drymix business and assets from the receivers, Grant Thornton. The agreement is conditional on clearance being granted. A copy of the agreement is attached at Confidential Annexure 13.
- 3.2 Grant Thornton are selling the business as a going concern. They issued an Information Memorandum dated December 2020 (**IM**), a copy of which is at Confidential Annexure 1.
- 3.3 The Businesses being sold are:

- (a) Drymix N.Z. Limited (in receivership and liquidation). This company produces easy mix concrete products to the DIY market throughout New Zealand with its main customer ([ ]) being Mitre 10. It also owns part of the land in Feilding at 7-11 Awa Street, where it has its main plant;

Asset detail	Value (NZ\$000s)
[ ]	[ ]
[ ]	[ ]
[ ]	[ ]
[ ]	[ ]

- (b) Drymix Cement Limited (in receivership and in liquidation). This company imported cement from Vietnam and fly ash from Thailand and had depots in Auckland, Tauranga, Hamilton, Napier, Christchurch and Bluff from where it distributed the cement and fly ash to its customers throughout New Zealand. The company was placed into receivership on 21 April 2020 and the Receivers sold the remaining stock to customers and proceeded with an asset sale. The remaining assets included in this sale were used in the production of the bagged concrete sold by Drymix N.Z. Limited;

Asset detail	Value (NZ\$000s)
[ ]	[ ]
[ ]	[ ]
[ ]	[ ]

- (c) Drymix Bitumen Limited (in receivership). This company exported cold bitumen in bulk bags from Portugal to Tahiti and did not undertake business in New Zealand at all. It stopped trading in early 2020 as a result of a relationship breakdown with the supplier due to cash flow constraints in Drymix Cement. This company was placed into receivership on 27 July 2020;

Asset detail	Value (NZ\$000s)
[ ]	[ ]

- (d) Drymix Imports Limited (in receivership). This is a shell company and never traded. There are no assets that the receivers are aware of that form part of the sale, but

they have included the company for completeness. This company was placed into receivership on 27 July 2020;

- (e) XNP Limited (in receivership). This company has only ever owned land at Feilding, at 5-7 Awa Street and it charged rent to Drymix NZ for the use of land in Feilding. It was placed into receivership on 27 July 2020; and

Asset detail	Value (NZ\$000s)
[ ]	[ ]

- (f) Romex N.Z. Limited (in receivership). This company's business was a pave-jointing system which they imported from Germany and sold in New Zealand. This company stopped trading in 2017/2018 because it was too expensive for the New Zealand market with alternative products available at a cheaper cost. It was placed into receivership on 27 July 2020.

Asset detail	Value (NZ\$000s)
[ ]	[ ]

A copy of the asset schedules for Drymix N.Z. Limited (in receivership and liquidation), Drymix Cement Limited (in receivership and liquidation), Drymix Bitumen Limited (in receivership) and Romex N.Z. Limited (in receivership) are at Confidential Annexure 2

- 3.4 The above figures are the value of the assets as at the date of liquidation which have factored in depreciation between 31 March 2020 and the date of receivership for Drymix Bitumen Limited, Romex N.Z. Limited and Drymix N.Z. Limited. In respect of Drymix Cement Limited, the receivers undertook an asset sale. However, the assets that are currently being sold as part of this transaction were used in the Drymix N.Z. Limited business. A copy of the reconciliation schedules for Drymix Bitumen Limited, Romex N.Z. Limited and Drymix N.Z. Limited are at Confidential Annexure 16.
- 3.5 Dunlop is a non-trading entity that has been set up as a special purpose vehicle for this transaction. Dunlop has no relation to the Dunlop tyre company. It has the right to use the Dunlop brand name in this category of product only. Over the past 12 months Ardex New Zealand Limited which is wholly owned by Ardex Australia Pty Limited, the 70% shareholder of Concrete Group Limited, [ ]. The product was manufactured by Cemix and post-acquisition of Drymix, this product will be consolidated in the new Dunlop entity. Postcrete is equivalent to Cemix' Superstrength Fastcrete and Fibercrete is a niche product with limited sales that is equivalent to Cemix' No Steel Concrete.
- 3.6 [ ].
- 3.7 The Proposed Transaction will be implemented under the terms of a sale and purchase agreement between Drymix and Dunlop, with Concrete Group as guarantor (the **SPA**).

- 3.8 Completion of the Proposed Transaction will be conditional on a range of conditions including receipt of clearance from the Commission.

### **The rationale for the transaction**

- 3.9 The Proposed Transaction will enable Concrete Group to manufacture in the lower North Island and the South Island. This will optimise freight costs for both Dunlop and Cemix and reduce their inter-regional transport/traffic. This will allow Dunlop and Cemix to better compete with Firth Industries by reducing cost, as well as reducing their carbon footprint to improve their environmental credentials. A copy of the documents seen by Dunlop directors recording the rationale for the transaction are attached at Confidential Annexure 14.
- 3.10 Cemix currently operates one plant located in Auckland. Drymix has plants in Orari near Timaru and in Feilding. Operating out of these plants in addition to its Auckland plant will provide a number of benefits for Cemix. In particular, it will:
- (a) enable Cemix to reduce freight costs nationwide. Currently Cemix supplies Bunnings Queenstown at the Bunnings national price exclusive of GST and rebates of [ ] a 20kg bag of Multicrete while the freight cost from Auckland alone is [ ] a bag when transported in bulk on a per tonne basis compared with an average cost of approximately [ ] per bag. [ ];
  - (b) provide security for Cemix' business by removing reliance on a single manufacturing facility. During the COVID-19 lockdown periods for example, only Cemix had to pause production entirely because it operated from a single location in Auckland, whereas both Drymix and Firth operated from two geographically separated locations; and
  - (c) increase capacity and enable Cemix to streamline its operation [ ].
- 3.11 The Drymix plants require significant investment to bring them up to standard and allow them to continue operating. [ ].
- 3.12 A copy of a presentation made to Dunlop directors recording the estimated capex for each site is attached at Confidential Annexure 15. The presentation records the upper end of capex required. Dunlop estimates that it will need to spend at least [ ] to bring the Drymix plants up to standard plus further ongoing capital expenditure, totalling [ ].

## **Counterfactual**

### *Counterfactual for Drymix*

3.13 The receivers consider that a likely counterfactual for Drymix in the absence of the Proposed Transaction proceeding would be that its assets would be broken up for sale and would exit the relevant market.

3.14 The receivers are providing further information to the Commission.

### *Counterfactual for Cemix*

3.15 [ ].

3.16 [ ].

## **Other competition agencies that are being notified**

3.17 The Proposed Transaction relates only to New Zealand. No competition agencies in other jurisdictions have been or will be notified of the Proposed Transaction.

## **4. THE ACTIVITIES OF THE PARTIES TO THE TRANSACTION**

### **The Applicant – Dunlop Drymix Limited**

4.1 Dunlop is a wholly owned subsidiary of Concrete Group. Concrete Group is 30% owned by New Zealand company, Concrete Trustee Limited and 70% owned by Ardex Australia Pty Limited, an Australian company that is ultimately owned by a German entity, Ardex Großbritannien-Holding GmbH.

4.2 Cemix and Dunlop are both wholly owned subsidiaries of Concrete Group. As explained above, Dunlop has been incorporated specifically as the vehicle to acquire Drymix and is not currently trading.

4.3 Cemix is the relevant entity for the purposes of assessing the competitive effects of the Proposed Transaction. Accordingly, the focus of this application is on the Cemix and Drymix businesses.

4.4 We provide at Confidential Annexure 3 a copy of Concrete Group's most recent consolidated group annual report and financial statements.

### *Cemix*

4.5 Cemix is a manufacturer and distributor of bagged concrete and mortar, bagged cement, wet bagged sand, builders mix, tile adhesives and construction chemicals. It has a range of bagged concrete and mortar products marketed under the product names Multicrete, Fastcrete, Maxcrete and Masonry Mortar in 20Kg and 25Kg bags. Multicrete is also available in 40Kg bags.

- 4.6 Cemix supplies its bagged concrete and mortar products to large building product retailers, hardware stores, plumbing merchants, landscape yards and garden centres. In 2020, its top two customers represented over [ ] of its revenue, with Bunnings accounting for approximately [ ] and Carters [ ].
- 4.7 Cemix supplies its products throughout New Zealand and has a factory in Onehunga, Auckland. As a consequence of its factory location and the North island presence of its largest customer, Bunnings, in 2020, [ ] of Cemix' sales were in the North Island and [ ] in the South Island.
- 4.8 The capacity of Cemix' factory is [ ] per annum, with approximately [ ] of its estimated capacity used to produce bagged concrete and mortar.<sup>1</sup> Cemix is producing at [ ].
- 4.9 [ ].
- 4.10 Cemix acquires sand [ ].
- 4.11 A full list of the products of Cemix/Concrete Group is set out at Annexure 4.
- 4.12 A full list of Cemix' customers is set out at Confidential Annexure 5.
- 4.13 Further information about Cemix can be found at <https://www.cemix.co.nz/>.

#### **The other party – Drymix**

- 4.14 Drymix is a manufacturer and distributor of bagged concrete, mortar, plaster and asphalt products.
- 4.15 Drymix has two product brands for bagged concrete and mortar products, 'Drymix' and 'Strongcrete'. The 'Drymix' brand is [ ] Mitre 10, and the 'Strongcrete' brand is supplied to Drymix' other customers. Sales to Mitre 10 represent approximately [ ] of Drymix' total sales.
- 4.16 Drymix has one manufacturing plant in Feilding in the North Island and another in Orari (between Ashburton and Timaru) in the South Island. Its head office is in Auckland. The total capacity of the two plants is estimated at [ ] tonnes per annum – the Feilding plant has an estimated capacity of [ ] tonnes per annum and the Orari plant has estimated capacity for [ ] tonnes. [ ]. Drymix has a greater presence in the South Island than its competitors because of its lower distribution costs from its Orari plant, and the strong South Island presence of its largest customer, Mitre 10.
- 4.17 [ ] of Drymix' sales are to South Island customers and [ ] to North Island customers.
- 4.18 Drymix acquires sand and aggregate from [ ] and cement from [ ] and [ ].
- 4.19 Drymix was placed into receivership and subsequently liquidation in July 2020 after it incurred significant losses in its cement importing business while at the same time incurring significant debts in its bagged concrete and mortar business as a consequence of production issues experienced in the installation of its new plant in Feilding. Drymix purchased a new bagging plant [ ].

---

<sup>1</sup> Actual capacity varies depending on the products being produced and the amount of downtime for maintenance, product changes and repairs.

- 4.20 Cemix had recently acquired a new bagging plant which produced a new type of rain proof bag and [ ]. Drymix purchased the bagging plant from Italy for over [ ], Dricon used the opportunity to take over some of Drymix's market share. The receiver will provide further information to the Commission about the bagging plant issues and the causes for the company's receivership.

### **Horizontal overlap between the parties**

- 4.21 While both parties supply a range of bagged concrete, mortar and asphalt products, the key area of overlap is the manufacture and distribution of bagged concrete and mortar. Bagged concrete and mortar products account for more than [ ] of each party's total sales. As discussed below at 5.8 there is no overlap in bagged cement.
- 4.22 A table showing the overlap between the parties is set out in Annexure 6 and a list of the main products supplied by each of the parties and the revenue and volumes by product for each of the parties is in Confidential Annexure 7.
- 4.23 Drymix' tonnage and revenue information is set out in Confidential Annexure 17.

## **5. INDUSTRY CONTEXT AND RELEVANT MARKETS**

### **Industry overview**

- 5.1 Bagged concrete and asphalt products are used by construction companies, tradespeople and DIY enthusiasts for all types of commercial and domestic construction purposes.
- 5.2 The products are supplied by large building product retailers, hardware stores, plumbing merchants, landscape yards and garden centres.
- 5.3 Bagged concrete and asphalt products are dry bagged building materials used for paving, landscaping and concreting jobs in particular. The products come in a variety of different sized bags and are particularly useful for smaller scale projects. Even the smallest of DIY jobs generally requires more than a single bag of bagged concrete and it is therefore rare that a customer would acquire only a single bag of bagged concrete. For example, installing a letterbox would usually require 2-3 bags of bagged concrete. A significant proportion of the sales of bagged concrete and mortar are to trade customers.

### **Bagged concrete and mortar products**

- 5.4 Bagged concrete is a dry powder made up of sand, cement, aggregate and additives premixed in a bag. Users add water on site to transform the powder into concrete. Bagged mortar is a dry powder comprising just sand and cement. Further detail on the components of bagged concrete and mortar are set out below.
- 5.5 Bagged concrete and mortar is designed for DIY and simple projects where only small amounts of concrete or mortar are needed. It is typically sold in bags and supplied to the large building product retailers (Bunnings, Carters, ITM, Farmlands, Mico, Mitre 10 and Placemakers), hardware stores, plumbing merchants, landscape yards and garden centres.

### *Sand*

- 5.6 Sand is a loose, fragmented, naturally-occurring material consisting of very small particles of decomposed rocks, corals, or shells. Sand is used to provide bulk, strength, and other properties to concrete and mortar. Sand is mined in New Zealand from a number of open

pits, extracted from the sea, or dug up from rivers. There are a large number of sources of sand in New Zealand with over 100 suppliers nationwide. Suppliers range from large suppliers such as Fletchers, Atlas Concrete and Fulton Hogan, to small farmers in the Waikato who supply sand from their properties. Sand is supplied to retailers such as garden centres, landscape yards, online retailers and major hardware retailers such as Bunnings, Placemakers, ITM, Carters, Hynds and Mitre 10.

### *Cement*

- 5.7 Cement is a powdery substance that sets, hardens and adheres to other materials to bind them together. The major suppliers of cement in New Zealand include Fletchers (who supply approximately [ ] of the market), Holcim (who also supply approximately [ ] of the market) and HR Cement (who supply approximately [ ] of the market). They supply to retailers such as Cemix, Allied Concrete, Atlas Concrete, Firth Concrete and all building merchants and landscape yards, both in bags and in bulk. Holcim does not have any manufacturing plant in New Zealand, and therefore imports its entire market share quantity from overseas.
- 5.8 Drymix Cement Limited imported and bagged cement prior to receivership. The Drymix business being purchased does not include a bagged cement product as that business was discontinued by the receivers. Cemix has one 20kg bagged cement product which is toll manufactured by [ ] and represents [ ] of Cemix' overall total sales.

### *Aggregate*

- 5.9 Aggregate is a coarse-to-medium grained particulate material used in many construction materials. It is a mined material. Aggregate serves as enforcement to add strength to the overall bagged concrete product. Aggregate is sourced in New Zealand from suppliers such as Fletchers, Fulton Hogan, Stevensons, Atlas Concrete, ZMR Aggregates. They supply to similar retailers as suppliers of sand.

### *Additives*

- 5.10 Additives give bagged concrete its specific characteristics such as fast drying characteristics or extra strength characteristics. Additives include water reducing agents and fast setting additives. All additives are imported and constitute between 1% and 5% of a total batch.

### *The Bag*

- 5.11 Bagged concrete and mortar products were traditionally sold in multi-layer paper bags manufactured in New Zealand by OJI. Of late, the bagged concrete and mortar market is moving towards using rainproof plastic bags which are used by both Cemix and Drymix. Rainproof plastic bags are manufactured by third party suppliers in Europe.

### *Manufacturing Process*

- 5.12 There are five steps involved in making bagged concrete:
- (a) **Drying** – loose sand and aggregate arrives in separate bulk trucks and trailers. Both components arrive wet and are left in large piles on the ground. The components are loaded separately into the drying plant, a specialised drying machine that runs on natural gas.

- (b) **Storage** – the dried sand and aggregate are separately stored in silos. Cement arrives in a pressurised tanker and is piped from the tanker into its own silo also.
- (c) **Weighing** – each of the three components are batch weighed to the set amount required.
- (d) **Mixing** – once weighed, the three components are put into a mixer for mixing. Approximately 15-20% of bagged concrete is made up of cement with the remainder comprising equal proportions of sand and aggregate. Depending on the product being made, a small proportion of additive (1% to 5%) may be added.
- (e) **Bagging** – the final mixed product goes into the bagging machine where the required weight is put into bags. The bagged product is put onto pallets to be transported to retailers' premises for onsale to end users.
- 5.13 The process above is the same for making bagged mortar except that aggregate is not included. Bagged mortar is a mix of fine sand and cement only.
- 5.14 The manufacturing process at Cemix is largely an automated process, whereas Drymix' manufacturing facilities are comparatively less automated.
- 5.15 Cemix estimates that there is a [ ] split of sales for trade and DIY, [ ] being for trade. As a wholesale provider Cemix does not have access to actual retail sales figures.
- 5.16 Demand has been increasing along with other building products due to increased building activity, but the product mix and channels to market have remained constant.

#### *Product cost*

- 5.17 A breakdown of the average cost incurred by Cemix per bag of bagged concrete (excluding overheads) is set out in the table below.

Product	Freight	Cost of goods sold	Wastage	Machine Wrap	Total Cost	Average net wholesale price excluding GST and net of rebates
Fastcrete 20kg bag	[ ]	[ ]	[ ]	[ ]	[ ]	[ ]
Multicrete 20kg bag	[ ]	[ ]	[ ]	[ ]	[ ]	[ ]
Maxcrete 20kg bag	[ ]	[ ]	[ ]	[ ]	[ ]	[ ]
Superstrength Fastcrete 20kg bag	[ ]	[ ]	[ ]	[ ]	[ ]	[ ]

#### **Wastage Breakdown**

**Moisture content** – sand and aggregates are delivered with water content. Goes through the drier and reduces the net content of the material

**Electricity and Gas, diesel for the loader**

**Packaging** – top cover for pallets and machine wrap

**PPE Gear** – masks, gloves, safety glasses, uniform

**Excess product bagged into each bag**

## Relevant markets

- 5.18 The Commission has not previously considered markets for the supply of bagged concrete and mortar.
- 5.19 While Drymix and Cemix both supply a number of bagged concrete, mortar and asphalt products, the core area of overlap is the manufacture and distribution of bagged concrete and mortar.
- 5.20 Asphalt does not raise competition issues. The major supplier of asphalt is Fulton Hogan with its bagged asphalt product EZ Street <https://www.ezstreetasphalt.co.nz/> which it supplies to Bunnings and Mitre 10. Fulton Hogan also has access to materials from its own quarries and the repair contract for the roads. Other suppliers include Coldmix <https://www.coldmix.co.nz/>, Cohe Group <https://cohe.co.nz/pothole-repair/> and Asphalt in a bag <https://www.asphaltinabag.co.nz/>. The Cemix and Drymix shares of the bagged asphalt market are insignificant.
- 5.21 As outlined above at paragraph 5.8, there is no overlap in bagged cement.
- 5.22 Accordingly, Dunlop considers that the relevant market for the purposes of assessing the likely competition effects of the Proposed Transaction is the national market for the manufacture and supply of bagged concrete and mortar.

### *Product dimension*

- 5.23 There are several substitutes for bagged concrete and mortar which are discussed further in section 6 of this application. Customers can purchase builders mix (a premix of sand and aggregate) and add cement and water to make concrete, or purchase sand, aggregate and cement individually and mix them using a wheel barrow and shovel to produce concrete very similar to what comes premixed as bagged concrete.
- 5.24 All of the suppliers of bagged concrete products supply the full range of bagged concrete and mortar products. There are also numerous large potting mix type landscape product manufacturers and baggers, who currently sell bagged sand, aggregate and builders' mix and can without much effort upgrade to mixing and bagging dry mix concrete.
- 5.25 The same machinery is used to produce all of the different types of bagged concrete and mortar products and therefore there is significant supply-side substitution. The different products are produced using the same production line. Changing production from one product to another is simple. For example, no major system changes are required when transitioning from Fastcrete to Multicrete and the machines are stopped for less than an hour. When transitioning from concrete to a finer product such as mortar however, Cemix opens the mixer and drops the product out of it to make sure there is no stone residue. This process can take up to two hours. In all cases the cost of transitioning from one product to another is insignificant. [ ]].
- 5.26 There is also significant demand-side substitutability between the different types of bagged concrete, or between different mortar products. For example, customers who may prefer a quick drying concrete formula could switch to a standard bagged concrete if the price of quick drying cement were to increase, and vice versa. As a consequence, the retail price differential between these types of bagged cement is not significant. The majority of bagged concrete retails between \$8 and \$10 plus GST for a 20kg bag.

- 5.27 Some bagged concrete and mortar products are interchangeable. For example, multcrete can be used for putting in a fence post or a concrete slab but fastcrete is not suitable for a concrete slab because of the speed at which it sets.

*Geographic dimension*

- 5.28 The geographic scope of the relevant market is national, as bagged concrete and mortar is distributed on a national basis. The big box retailers require national delivery into store at a single national price and a supplier does not have the ability to provide products on a regional basis or on a national basis at regional pricing.
- 5.29 Products are freighted directly from factory to store on pallets of 64 bags of 20kg. It is not economic to double handle shipments e.g via regional distribution hubs as the freight cost (on average [ ] per bag) would increase significantly. Freight represents [ ] of the free into store cost of the product.

*Functional dimension*

- 5.30 Both parties supply at the wholesale level and therefore this is the appropriate market dimension.

**Competitors of Drymix and Cemix**

- 5.31 There are three major national suppliers of bagged concrete and mortar – Firth Industries (through its Dricon brand), Cemix and Drymix – and a small number of regional suppliers.
- 5.32 The largest supplier of bagged concrete in New Zealand is Firth Industries:
- (a) Firth Industries is the trading name for Fletcher Concrete and Infrastructure Limited, a member of the Fletcher Group. It supplies bagged concrete and mortar, plasters, sands, aggregates, liquids, additives and sealers under the Dricon brand name.
  - (b) The Fletcher Group also includes Golden Bay Cement and Winstone Aggregates, suppliers of all of the key raw ingredients for bagged concrete, Winstone Transport, and Placemakers, a large retailer. Firth Industries is therefore vertically integrated upstream and downstream.
  - (c) Firth Industries produces its bagged concrete and mortar products at three manufacturing locations: a manufacturing plant it operates in Tuakau (Auckland region), another at Waikanae (Wellington region), and Fulton Hogan's manufacturing plant in Christchurch, pursuant to a toll manufacturing arrangement. Prior to Drymix being placed into receivership, Firth Industries had a toll manufacturing arrangement with Drymix to produce its Dricon products at Drymix's Orari plant. This arrangement came to an end when Drymix was placed into receivership.
  - (d) Firth Industries' largest customer is Placemakers which, as noted above, is also a member of the Fletcher Group. Its other significant customers include MICO, Mitre 10 and ITM.
  - (e) Since Drymix went into receivership, Firth Industries has increased its market share. It now stocks several major Mitre 10 outlets who no longer purchase from Drymix.

- (f) Further information about Firth Industries and its Dricon products can be found on its website: <https://www.firth.co.nz/>.

5.33 The other suppliers of bagged concrete include:

- (a) Master Mix Concrete Solutions – Master Mix Concrete Solutions supplies bagged concrete and mortar products, post-hole mixes, plasters, cementitious bags, concrete coating and repair products, and pavement locking mix under the Mastermix brand name.

Mastermix operates from Foxton, New Zealand. However, MasterMix supplies to locations in both the North and South Islands.

Mastermix's customers include Kāpiti District Council, Christchurch City Council, Timaru District Council, Dunedin City Council, Cardno Latin America, Wellington Water and Masterton District Council. Mastermix appears to also sell its products directly to end customers. Customers can request quotes on MasterMix's website.

Further information about Master Mix Concrete Solutions can be found on its website: <https://mastermix.co.nz/>.

- (b) Ezymix – Ezymix supplies bagged concrete and mortar products coatings, tiling adhesives, flooring products (toppings, sealers, primers, screeds), renders, and various machines and tools under the Ezymix brand name.

Ezymix operates from Waharoa, New Zealand. Ezymix supplies to locations in the North Island. Ezymix supplies its products to outlets including Emmersons Transport, AITranz, Waharoa Transport, and The Block Shop NZ Ltd. Ezymix appears to also sell its products directly to end customers.

Further information about Ezymix can be found on its website <http://ezymix.co.nz/>.

- (c) 360 Urban – is a pavement systems company. It imports into New Zealand a range of Steintec bagged concrete and mortar products from Europe and operates the [www.steintec.co.nz](http://www.steintec.co.nz) website.

5.34 Contact details for each of these competing suppliers are in Annexure 8.

5.35 The smaller suppliers of bagged concrete and mortar in New Zealand supply to regional customers. They predominantly supply within their own geographical markets because they do not have the capability to supply nationwide. A table listing the products supplied by each is included in Annexure 9.

5.36 Regional operators are competitive for customers other than the big box retailers who do not require national distribution. [ ].

5.37 Apart from the suppliers listed, there are a large number of potential entrants into the bagged concrete and mortar market:

- (a) Bag Boys Limited has a range of bagged sands and aggregates and operates an automated plant which could easily produce bagged concrete and mortar. Bag Boys operates a plant in Papakura. Further information on this company can be found on its website: [www.bagboys.co.nz](http://www.bagboys.co.nz).

- (b) Fulton Hogan, which owns various sand and aggregate quarries, also has a plant in Christchurch which has the ability to dry sand/aggregate and mix and bag concrete and mortar products. From time to time, this plant is used by Firth Industries under a toll manufacturing arrangement discussed above. Fulton Hogan therefore has the capacity and plant to supply bagged concrete and mortar.
- (c) All major landscape product manufacturers and baggers, including Daltons, Palmers, Kings and Tui, sell bagged sands and aggregates. They can easily extend their ranges into bagged concrete and mortar using their existing mixing and bagging plants.
- (d) Finally, there are many bagged asphalt manufacturers (for example Coldmix <https://www.coldmix.co.nz/>, Cohe Group <https://cohe.co.nz/pothole-repair/>, Asphalt in a bag <https://www.asphaltinabag.co.nz/> and EZ Street <https://www.ezstreetasphalt.co.nz/>) who could enter the bagged concrete and mortar market by simply upgrading their manufacturing plant.

### **Customers of Cemix and Drymix**

5.38 The names and contact details for each party's top 6 customers, and the revenue and volumes earned from each in the last financial year are at Confidential Annexure 10.

## **6. COMPETITION ASSESSMENT**

6.1 The Proposed Transaction is unlikely to have the effect of substantially lessening competition in the bagged concrete and mortars market or any related market in New Zealand because:

- (a) large retailers with national coverage will continue to wield a considerable degree of countervailing power and impose a significant competitive constraint on the merged entity;
- (b) there will continue to be significant competitive constraint from the market leader Firth Industries, and smaller regional suppliers;
- (c) substitute concrete and mortar products will continue to provide a substantial constraint on the merged entity;
- (d) barriers to entry and expansion in the bagged concrete and mortar market are low as existing landscape product manufacturers and Fulton Hogan can potentially enter due to their existing plants; and
- (e) the Proposed Transaction will not result in any coordinated effects given, inter alia, the countervailing power of customers, the competitive constraint posed by substitute products and the low barriers to entry.

### **Customers possess considerable countervailing power**

6.2 The large majority of bagged concrete and mortar products sold in New Zealand are sold to end customers through major hardware retailers including Bunnings, Mitre 10,

Placemakers, Carters and ITM. The Commission has previously acknowledged that these large retailers have strong bargaining power vis-à-vis their suppliers.<sup>2</sup>

6.3 These customers have a strong ability to negotiate favourable terms with suppliers, including price, exclusivity and quality, due to their size both as a customer and in relation to their overall operation.<sup>3</sup> [ ]. Drymix's financial difficulties were also caused, in large part, by the acquisition of a new bagging plant [ ], Dunlop understands that Drymix had little choice but to invest in the new plant.

6.4 [ ].

6.5 Post-transaction, large national retailers will continue to wield a considerable degree of countervailing power and impose a significant competitive constraint on the merged entity. In particular, the size of the large retailers means that they would be able to credibly threaten to:

- (a) obtain supply of bagged concrete and mortar from Firth Industries. A number of Mitre 10's flagship stores have already switched from Drymix to the Dricon brand since Drymix went into receivership and liquidation;
- (b) sponsor the expansion of one of the regional suppliers of bagged concrete and mortar products or the entry into the New Zealand market of a new competitor. As explained earlier, [ ] of Drymix's sales are to Mitre 10 (and were prior to receivership) and more than [ ] of Cemix's sales are to Bunnings and Carters. It would only require one contract for a supplier to have a viable business; and/or
- (c) import other brands of bagged concrete and mortar. In Australia, Bunnings acquires bagged concrete and mortar from Dingo Cement and imports its own home brand Bastion. Dingo Cement is an Australian-owned company which has manufacturing facilities in Vietnam.<sup>4</sup> These facilities were built to supply the Australian and international markets with cement dry mix products. [ ]. It has a 2007 registered trademark for Bastion in New Zealand for plaster, cement and concrete, and applied on 5 January 2021 for the trademark to be extended to include concrete mixtures.

6.6 Wholesale price trends (excluding GST) over the last five years are set out in the table below, while sales bags and weight are set out in Confidential Annexure 12.

---

<sup>2</sup> Decision 510 at paragraphs 117 to 120.

<sup>3</sup> For example, Bunnings operates 41 stores nationwide and Mitre 10 operates 84.

<sup>4</sup> <https://dingocement.com.au/about/>.

[ ]

6.7 A copy of Drymix’ prices net of rebates for Mitre 10 and ITM is attached at Confidential Annexure 18.

**The merged entity will continue to face vigorous competition**

6.8 Dunlop’s estimates of market shares for the bagged concrete and mortar market are set out in Table 1 below. There is no independent share data available for this market and therefore these estimates represent management’s best guess based on their market experience and knowledge.

**Table 1: 2020 market share estimates for the bagged concrete and mortar market**

Supplier	Estimated 2020 revenues	Estimated 2020 share
Firth Industries (Dricon)	[ ]	[ ]
Cemix	[ ]	[ ]
Drymix	[ ]	[ ]
Others (360 Urban, Master Mix, Ezymix and imports)	[ ]	[ ]

6.9 The Proposed Transaction will combine the number two and number three market participants, resulting in a market share of approximately [ ] by revenue for the merged entity. Firth, which is currently the largest supplier of bagged concrete and mortar products in New Zealand with a market share of approximately [ ], will remain a vigorous competitor and has been increasing market share since the Drymix receivership.

6.10 Firth will continue to constrain the merged entity post-acquisition. It has a strong market presence because of its upstream and downstream vertical integration as a member of the Fletcher Group. Since the Drymix receivership, Firth has gained market share at Drymix’s expense: it is now supplying several Mitre 10 outlets that were previously [ ] supplied by Drymix.<sup>5</sup>

**Substitute products provide a significant competitive constraint**

6.11 There are a number of substitutes for bagged concrete and mortar that also provide a significant constraint on market participants’ ability to increase price or reduce quality. In particular, end customers can:

- (a) purchase builders mix (a premix of sand and aggregate) and cement and mix these with water to make concrete. Both builders mix and cement is readily available from numerous suppliers around New Zealand including garden centres, big box retailers such as Mitre 10 and Bunnings, and other large suppliers including

---

<sup>5</sup> For example, Cemix is aware that Dricon products are now being supplied by several of Mitre 10’s flagship stores, including Mitre 10 Mega in Westgate and Lincoln Road.

Daltons<sup>6</sup> and Atlas Concrete.<sup>7</sup> The ratio of builders' mix to concrete is 5:1 (5 bags of 20kg builders mix will require a 20kg bag of cement to produce 120kg of concrete, which is equivalent to 6 bags of 20kg bagged concrete.) A single 20kg bag of Cemix builders' mix costs approximately \$7.56 from Bunnings and a single 20kg bag of Golden Bay cement costs approximately \$9.13 from Mitre 10. This compares to a single bag of 20kg Drymix Easy to Mix Concrete which currently costs \$9.49 from Mitre 10. While the cost of combining builders' mix and concrete is greater than acquiring a single bag of bagged concrete, as explained in paragraph 5.3 above, it is rare that a customer would acquire a single bag of bagged concrete;

- (b) purchase sand, aggregate and cement separately to make their own concrete mix. The cost of acquiring the separate components to make concrete is less than acquiring a combination of builders' mix and concrete, or bagged concrete. As explained in section 5 of this application, each of these components are readily available from numerous suppliers throughout New Zealand; or
- (c) purchase ready-mix concrete. Ready-mix concrete is concrete that has been manufactured for a specific project and is delivered to site in a concrete truck. The minimum delivery in New Zealand is 1 cubic metre of concrete, which is the equivalent of approximately 100 20kg bags of bagged concrete.

6.12 While customers enjoy the convenience of bagged concrete and mortar, the reality is that customers will switch to alternative sources of concrete in response to an increase in price. Bagged concrete and mortar is a low margin, high volume commodity product and this will not change post-transaction.

6.13 As noted above, concrete trucks are a substitute for bagged concrete for large scale projects. The minimum quantity of concrete required to use a concrete truck in New Zealand is one cubic metre. This equals 100 bags of 20kg bagged concrete. One cubic metre of ready-mix concrete costs around \$250 compared with more than \$800 for 100 bags. This creates a cap on the market demand for bagged concrete.

#### **Barriers to entry or expansion are low**

6.14 Barriers to entry and expansion are not significant.

6.15 Bagged concrete and mortar are relatively simple, low-cost products to manufacture. All the required ingredients (sand, aggregate, and cement) are readily available from local suppliers.

6.16 The only machinery required is a drier, some storage silos and a bagging machine, which are relatively inexpensive ([ ]). However, the low profit margins in the industry and high freight costs ([ ]), combined with the countervailing power of the large retailers and the constraints imposed by substitute products operate as disincentives for greenfield entry into the market.

6.17 As explained at paragraph 5.37 above, there are a large number of potential entrants into the bagged concrete and mortar market. Each of these potential entrants already have

---

<sup>6</sup> <https://www.daltonlandscape.co.nz/shop/Sand+Metal+Builders+Mix++Scoria/BM20+Builders+Mix.html>

<sup>7</sup> <https://atlasconcrete.co.nz/building-materials/builders-mix/>

some or all of the plant required to produce bagged concrete and mortar products and could therefore quickly enter the market at very little cost in response to a price increase.

- 6.18 There are also very low barriers to entry for overseas manufacturers of bagged concrete. As explained earlier, Dingo Concrete manufactures its bagged concrete products in Vietnam and supplies it to several markets around the world, including Australia. There are a large number of other suppliers of bagged concrete and mortar products in Australia who could supply to New Zealand customers. For example, Cement Australia, Adelaide Brighton, Australian Builders, Riversands Concrete and Sunshine Cement.
- 6.19 Bagged cement and mortar can also be readily imported from other overseas markets, outside of Australia. As explained earlier, Urban 360 imports Stientec bagged mortar and concrete products from Europe. Urban 360 is currently supplying Steintec bagged mortar and concrete products to the Auckland CBD and waterfront upgrade. Holcim also currently imports approximately 500,000 tonnes of cement into New Zealand from overseas. Holcim is also a very large dry bagged concrete manufacturer in Australia and could easily import product into New Zealand in response to an increase in price.
- 6.20 Pre-COVID 19 shipping line prices were common rated. Ships dropped imported product in multiple ports throughout the country for the same nationwide price. Consequently, imports did not face internal freight costs. Recent congestion issues have resulted in some shipping lines having little space so higher rates may apply for a limited period.
- 6.21 Dunlop is not aware of any specific risks associated with imported bagged concrete and mortar products. Bagged concrete and mortar is a standardised product globally.

### **No coordinated effects**

- 6.22 The Proposed Acquisition will not enhance the ability of Dunlop and other competitors to coordinate their behaviour, including because:
- (a) customers have significant countervailing power, as discussed earlier in this submission. These customers are price sensitive and due to their strong bargaining position and ability to switch to alternative suppliers, including their ability to sponsor entry, they could quickly disrupt any attempt to coordinate behaviour;
  - (b) the Proposed Transaction will not result in the removal of a particularly vigorous or effective competitor;
  - (c) barriers to entry are low, and existing suppliers could readily expand and others could enter, which reduces the likelihood of any coordination; and
  - (d) there is no history of anti-competitive coordination in the relevant market.
- 6.23 Cemix is a price taker with the merchants setting the price, so co-ordination between suppliers on price isn't likely or possible.
- 6.24 Non-price coordination (customers or markets) is equally unlikely because the merchant chains have national coverage and they dictate the terms of trade.
- 6.25 [ ].

7. **CONFIDENTIALITY**

- 7.1 Confidentiality is requested of the information in this notice that is highlighted in yellow and contained in square brackets, and the information set out in the Confidential Annexures, on the basis that disclosure would be likely unreasonably to prejudice the commercial position of the parties providing the information.
- 7.2 The Applicant requests that it be notified if a request is made to the Commission under the Official Information Act 1982 for release of the information for which confidentiality has been claimed.
- 7.3 Confidential and public versions of this Notice have been provided to the Commission.

## DECLARATION

I, Bhavdeep Dhillon, have prepared, or supervised the preparation of, this notice seeking clearance.

To the best of my knowledge, I confirm that:

- a) all information specified by the Commission has been supplied;
- b) if information has not been supplied, reasons have been included as to why the information has not been supplied;
- c) all information known to me that is relevant to the consideration of this notice has been supplied; and
- d) all information supplied is correct as at the date of this notice.

I undertake to advise the Commission immediately of any material change in circumstances relating to the notice.

I understand that it is an offence under the Commerce Act to attempt to deceive or knowingly mislead the Commission in respect of any matter before the Commission, including in these documents.

I am a director of Dunlop Drymix Limited and am duly authorised to submit this notice.

Name and title of person authorised to sign:

**CONFIDENTIAL ANNEXURE 5: FULL LIST OF CEMIX CUSTOMERS**

## ANNEXURE 6: PRODUCT COMPARISON TABLE

Category	Drymix	Cemix	Dricon
<b>FAST SETTING EASY MIX CONCRETE</b> – fast setting ready to mix concrete ideal for placement of posts.	<b>Product name:</b> QUICK to SET  <b>Price:</b> \$9.49 for a 20kg bag <sup>8</sup>  <b>STRONGCRETE equivalent:</b> 15 MINUTE CONCRETE  <b>Description:</b> Easy to use, fast setting concrete ideal for the placement of posts. Achieves a set in minutes and a 28-day strength of 20 MPa.  <b>Ingredients:</b> Consists of a blend of cement, graded dry quality sand and aggregates and selected additives.  <b>Available sizes:</b> 20kg bag (produces 9.5-10 litres of concrete).	<b>Product name:</b> FASTCRETE  <b>Price:</b> \$8.75 for a 20kg bag <sup>9</sup>  <b>Description:</b> Ideal for setting posts, fences, clothes lines, mailboxes and any use where a strength of up to 15MPa is required. No mixing is required, and the initial set time is 15 minutes.  <b>Ingredients:</b> Consists of aggregates (45-50%), graded sand (30-35%) and Portland cement (4-5%).  <b>Available sizes:</b> 20kg bag, 25 kg bag.	<b>Product name:</b> RAPIDSET  <b>Price:</b> \$14.69 for a 25kg <sup>10</sup>  <b>Description:</b> Dry bagged premixed concrete with special additives that make the concrete set in 15 minutes when added to water. Suitable for fence posts, letterbox posts, washing lines, and structural applications.  <b>Ingredients:</b> Consists of sand (10-50%), cement (10-40%), aggregates (25-60%) and additives (0-3%).  <b>Available sizes:</b> 20kg bag (produces 0.012m <sup>3</sup> of concrete).
<b>REGULAR EASY MIX CONCRETE</b> – ready to mix concrete ideal suitable for everyday use.	<b>Product:</b> EASY to MIX  <b>Price:</b> \$9.49 for a 20kg bag <sup>11</sup>  <b>STRONGCRETE equivalent:</b> READY TO USE CONCRETE  <b>Description:</b> Designed to produce a concrete mix that is easy to work with and provides excellent strength.
