I would like to say, we need the longest possible period we have to pay for this work. This is more money on expensive power bills already.

There should be no planned power outages over winter when it can be very cold when we are being told to have clean energy in heat pumps.

I would also question over the years that there has not been network upkeep done – how much has been paid to the Dunedin City Council, instead of going into the maintenance of the network. The money paid to the DCC needs to be repaid back into Aurora for this maintenance.
