Executive summary

1. This determination specifies weighted average cost of capital (WACC) estimates to apply for information disclosure year 2016 for gas distribution services supplied by Powerco Limited (Powerco's GDB).
2. Vanilla and post-tax WACCs have been estimated for the five year period commencing on the first day of disclosure year 2016 (ie 1 October 2015).¹ Mid-point, 25th percentile and 75th percentile WACC estimates have been determined.
3. The WACC estimates are summarised in Table 1 below. These WACC estimates are determined as at 1 October 2015.

Table 1: Summary of WACC estimates for Powerco's GDB 2016 ID year (%)

	Mid-point	25 th percentile	75 th percentile
Vanilla WACC	6.26	5.45	7.07
Post-tax WACC	5.69	4.88	6.50

¹ The vanilla WACC is a weighted average of the pre-corporate tax cost of debt and the cost of equity. The post-tax WACC is a weighted average of the post-corporate tax cost of debt and the cost of equity.

Introduction

4. This determination specifies WACC estimates to apply for information disclosure year 2016 (that is, the 12 months to 30 September 2016) for gas distribution services supplied by Powerco's GDB. Powerco has a disclosure year ending September, while other regulated gas distribution businesses have June year ends for information disclosure.² Estimated WACCs for the 2016 information disclosure year for those other businesses were set in July 2015.³
5. The WACC estimates are set pursuant to clauses 2.4.1 to 2.4.7 of the Gas Distribution Services Input Methodologies Determination 2012 (the GDS IM Determination).⁴
6. We have estimated both vanilla and post-tax WACCs. The vanilla WACC is a weighted average of the pre-corporate tax cost of debt and the cost of equity. The post-tax WACC is a weighted average of the post-corporate tax cost of debt and the cost of equity.
7. The parameter values, estimates and information sources used to estimate WACC are set out in this determination.
8. Additional commentary on the estimation of the risk-free rate and the debt premium is also provided. For example, this determination identifies the issuers and bonds that were analysed (including the credit rating and remaining term to maturity) when estimating the debt premium. The commentary also explains which debt premium estimates were given greater weight than other estimates.

Background

Changes in the risk-free rate and debt premium over time

9. The cost of capital input methodologies for the regulated services reflect that both the risk-free rate and the debt premium on bonds change over time.⁵
10. Changes in the risk-free rate and debt premium on bonds are illustrated below. Figure 1 shows, as at 1 October 2015, changes over time in the:
 - 10.1 five year risk-free rate; and
 - 10.2 debt premium on bonds rated BBB+ with a term of five years.

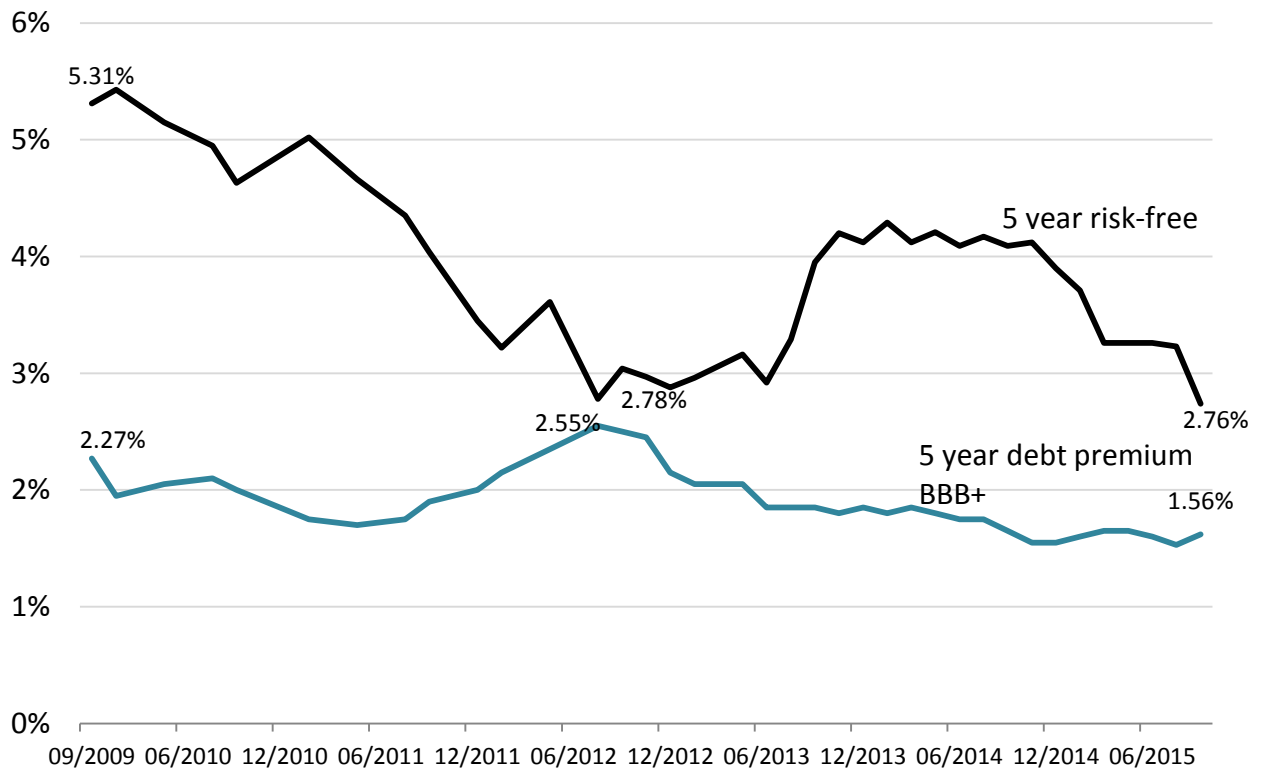

² Commerce Commission, *Gas Distribution Information Disclosure Determination* [2012], NZCC 23. See the definition of disclosure year, page 11.

³ Commerce Commission, *Cost of capital determination for information disclosure year 2016 for Transpower, gas pipeline businesses and specified airport services* [2015] NZCC 19.

⁴ Commerce Commission, *Gas Distribution Services Input Methodologies Determination* [2012] NZCC 27.

⁵ The risk-free rate is estimated based on an interpolation of bid yields on New Zealand Government stock to a term to maturity of five years. The debt premium is estimated on publicly traded corporate bonds according to the methodology specified in the GDS IM Determination.

Figure 1: Changes in the five year risk-free rate and debt premium over time

Reasons for differences in WACC under the various cost of capital input methodologies determinations

11. Differences in the WACCs estimated under the various cost of capital input methodologies reflect differences in the:
 - 11.1 date of estimation for the WACCs, which results in different estimates of the risk-free rate and debt premium;
 - 11.2 periods in which the WACCs will apply;
 - 11.3 context in which the WACCs will be used (67th percentile WACC estimates are used for the purposes of default and individual price-quality paths, while a mid-point and range is determined for information disclosure);
 - 11.4 assessed risk of the various regulated services (electricity distribution businesses (EDBs) and Transpower have an asset beta of 0.34, gas pipeline businesses (GPBs) have an asset beta of 0.44 and airports have an asset beta of 0.60); and
 - 11.5 value of leverage for airports (17%) and for EDBs, GPBs, and Transpower (44%).

WACC for information disclosure year 2016 for Powerco's GDB

12. Under clause 2.4.1 of the GDS IM Determination, we have determined the following vanilla and post-tax WACCs for Powerco's GDB information disclosure year 2016.

12.1 A mid-point estimate of vanilla WACC of 6.26% for the five year period commencing on the first day of disclosure year 2016 (ie 1 October 2015). Under clause 2.4.7, we have also determined a vanilla WACC range from 5.45% to 7.07%, where the endpoints are the 25th and 75th percentile estimates respectively.

12.2 A mid-point estimate of post-tax WACC of 5.69% for the five year period commencing on the first day of disclosure year 2016 (ie 1 October 2015). Under clause 2.4.7, we have also determined a post-tax range from 4.88% to 6.50%, where the endpoints are the 25th and 75th percentile estimates respectively.

Parameters used to estimate the WACC

13. These vanilla and post-tax WACC estimates reflect the parameters specified in the GDS IM Determination. The risk-free rate and debt premium are also estimated in accordance with the GDS IM Determination.

Summary of parameters

14. The parameters used to estimate the vanilla and post-tax WACCs are summarised in Table 2 below.

Table 2: Parameters used to calculate WACC for Powerco's GDB 2016 ID year

Parameter	Estimate
Risk-free rate	2.76%
Debt premium	1.56%
Leverage	44%
Equity beta	0.79
Tax adjusted market risk premium	7.0%
Average corporate tax rate	28%
Average investor tax rate	28%
Debt issuance costs	0.35%
Cost of debt	4.67%
Cost of equity	7.52%
Standard error of debt premium	0.0015
Standard error of WACC	0.012
Mid-point vanilla WACC	6.26%
Mid-point post-tax WACC	5.69%

Note: The cost of debt is calculated as the risk-free rate + debt premium + debt issuance costs. The cost of equity is calculated as the risk-free rate \times (1- investor tax rate) + the equity beta \times the tax adjustment market risk premium. The mid-point vanilla WACC is calculated as the cost of equity \times (1 - leverage) + the cost of debt \times leverage.

Risk-free rate

- The risk-free rate reflects the linearly interpolated, annualised, bid yield to maturity on New Zealand Government bonds with a term to maturity of five years. The estimates use data reported by Bloomberg for the month of September 2015 in respect of 15 April 2020 and 15 May 2021 maturity bonds. The April 2020 and May 2021 bonds have simple average annualised bid yields to maturity of 2.73% and 2.80% respectively.

16. The daily data reported by Bloomberg is annualised (to reflect the six monthly payment of interest), averaged to give a monthly average, and linearly interpolated to produce the estimate of a 2.76% interest rate on a NZ government bond with a five year term to maturity as at 1 October 2015.

Tax rates

17. The average corporate tax rate is the corporate tax rate of 28% for all years. The average investor tax rate is the investor tax rate of 28% for all years.

Standard error of the WACC

18. The standard error of the WACC is determined in accordance with the formula in the GDS IM Determination, and is shown to three decimal places only in Table 1 above.

Debt premium

19. The methodology for determining the debt premium is set out in clause 2.4.4 of the GDS IM Determination.
20. Clause 2.4.4(3)(d) requires the Commission to estimate the debt premium that would reasonably be expected to apply to a vanilla NZ\$ denominated bond that:
- 20.1 is issued by a GPB or an EDB that is neither majority owned by the Crown nor a local authority;
 - 20.2 is publicly traded;
 - 20.3 has a qualifying rating of grade BBB+; and
 - 20.4 has a remaining term to maturity of five years.
21. In estimating the debt premium, clause 2.4.4(4) of the GDS IM Determination provides that the Commission will have regard to:
- 21.1 bonds issued by a GPB or an EDB (that is neither majority owned by the Crown nor a local authority) with a rating of BBB+;
 - 21.2 bonds issued by another entity (that is neither majority owned by the Crown nor a local authority) with a rating of BBB+;
 - 21.3 bonds issued by a GPB or an EDB (that is neither majority owned by the Crown nor a local authority) with a rating other than BBB+;
 - 21.4 bonds issued by another entity (that is neither majority owned by the Crown nor a local authority) with a rating other than BBB+; and
 - 21.5 bonds issued by entities that are majority owned by the Crown or a local authority.

22. Clause 2.4.4(5)(a) provides that progressively lesser regard will ordinarily be given to the debt premium estimates in the order that the bonds are identified in clauses 2.4.4(4)(a) to (e).
23. Table 3 below shows the debt premium we have determined as at 1 October 2015. This table include a summary of information on the investment grade rated bonds we considered in determining the debt premium.
24. A spreadsheet showing the calculations for the debt premium and the risk-free rate is published on our website.⁶

⁶ See www.comcom.govt.nz/cost-of-capital

Table 3: Debt premium on a GPB/EDB-issued bond rated BBB+ with a remaining term of 5 years, as at 1 October 2015⁷

	Industry	Rating	Remaining term to maturity	Debt premium	Comment
Determined debt premium	EDB/GPB	BBB+	5.0	1.56	Regard to results 4(b) and 4(d) Generally consistent with 4(e)

Subclause	Issuer	Note ref.	Industry	Rating	Remaining term to maturity	Debt premium	Comment
4(a)	-	-	-	-	-	-	No data on applicable bonds
4(b)	WIAL	1	Other	BBB+	5.0	1.56	Credit rating and term are an exact match
4(c)	-	-	-	-	-	-	No data on applicable bonds
4(d)	Spark	2	Other	A-	5.0	1.12	BBB+ debt premium would be higher
	AIAL	3	Other	A-	5.0	1.07	BBB+ debt premium would be higher
	Contact	4	Other	BBB	5.0	1.56	BBB+ debt premium would be lower
	Fonterra	5	Other	A	5.0	1.14	BBB+ debt premium would be significantly higher
4(e)	Meridian	6	Other	BBB+	1.5	1.04	
	Genesis Energy	7	Other	BBB+	5.0	1.55	
	MRP	8	Other	BBB+	5.0	1.56	
	CIAL	9	Other	BBB+	5.0	1.44	
	Transpower	10	Other	AA-	5.0	0.94	

Notes on bonds analysed:

- 1 WIAL 5.27% bond maturing 11/06/2020; 6.25% bond maturing 15/05/2021.
- 2 Spark 5.25% bond maturing 25/10/2019; 4.5% bond maturing 25/03/2022.
- 3 AIAL 4.73% bond maturing 13/12/2019; 5.52% bond maturing 28/05/2021.
- 4 Contact Energy 5.277% bond maturing 27/05/2020; 4.40% bond maturing 15/11/2021.
- 5 Fonterra 5.52% bond maturing 25/02/2020; 4.33% bond maturing 20/10/2021.
- 6 Meridian 7.55% bond maturing 16/03/2017.
- 7 Genesis Energy 8.3% bond maturing 23/06/2020; 5.81% bond maturing 8/03/2023.
- 8 MRP 8.21% bond maturing 11/02/2020; 5.793% bond maturing 6/03/2023.
- 9 CIAL 5.15% bond maturing 6/12/2019; 6.25% bond maturing 4/10/2021.
- 10 Transpower 6.95% bond maturing 10/06/2020; 4.3% bond maturing 30/06/2022.

⁷ The five-year debt premiums on the Wellington International Airport Limited (WIAL), Spark, Auckland International Airport Limited (AIAL), Fonterra, Genesis Energy, Mighty River Power (MRP), Christchurch International Airport Limited (CIAL), and Transpower bonds are calculated by linear interpolation with respect to maturity.

25. Consistent with clauses 2.4.4(4) and 2.4.4(5)(a) of the GDS IM Determination, greatest regard has been given to the estimated debt premium on Wellington International Airport Limited's (WIAL's) bonds. These bonds are publicly traded, and are issued by an entity other than an EDB/GPB with a rating of BBB+.
26. As at 1 October 2015, the debt premium on the WIAL bond was estimated at 1.56%. Given that the credit rating and remaining term to maturity match the requirements in clause 2.4.4(5)(b), we consider 1.56% to be the appropriate starting point in estimating the debt premium (noting that WIAL is not an EDB/GPB).
27. We have also had regard to the estimated debt premium on bonds from a range of other issuers including Spark (1.12%, 5 years, rated A-), Auckland International Airport Limited (AIAL) (1.07%, 5 years, rated A-), Contact Energy (1.56%, 5 years, rated BBB) and Fonterra (1.14%, 5 years, rated A+). Consistent with clause 2.4.4(5)(a) these were given less weight as the issuers are not EDBs or GPBs, and the debt issues had different credit ratings than the BBB+ rating specified in clause 2.4.4(3)(d). Taking into account the likely impact of differences in credit rating and term to maturity, we consider that these debt premiums are generally consistent with an estimate of 1.56% for a BBB+ rated bond with a five year term to maturity.
28. The estimated debt premium on the Meridian bond (1.04%, 1.5 years, rated BBB+), the Genesis Energy bonds (1.55%, 5 years, rated BBB+), the Mighty River Power (MRP) bond (1.56%, 5 years, rated BBB+), the Christchurch International Airport Limited (CIAL) bonds (1.44%, 5 years, rated BBB+), and Transpower bonds (0.94%, 5 years, rated AA-) were also considered, but given less weight as these issuers are either majority owned by the Crown or a local authority.
29. Starting with the estimated debt premium on the WIAL bond, but having regard to the debt premium on a range of other bonds, we have determined the debt premium on a publicly traded, EDB/GPB-issued bond, rated BBB+ with a remaining term of five years to be 1.56% as at 1 October 2015.
