## WACC estimates for disclosure year 2024 for Enable

1. This cost of capital determination has been made under the Cost of Capital Input Methodologies (IMs).<sup>1</sup>
2. This determination specifies the weighted average cost of capital (WACC) estimates that will apply for information disclosure (ID) regulation for disclosure year 2024 for Enable Networks Limited (Enable).
3. The timing of our WACC determinations for Fibre ID regulation differs depending on the disclosure year of the regulated companies.<sup>2</sup> We determine an ID WACC for Enable in July each year as its disclosure year is 1 July to 30 June, with disclosure year 2024 being the year ending 30 June 2024.<sup>3 4</sup>
4. The vanilla and post-tax WACC estimates for disclosure year 2024 for Enable are summarised in Table 1 below.

**Table 1: Vanilla and post-tax WACC estimates**

	Mid-point
Vanilla WACC	7.87%
Post-tax WACC	7.36%
Standard error	0.0131

5. The WACC estimates have been calculated as at 1 July 2023, which is the first day of disclosure year 2024 for Enable.
6. This determination should be read in conjunction with our guidelines for estimating the WACC under the IMs.<sup>5</sup> These guidelines form part of this determination. The guidelines explain our methodology for calculating WACC estimates, including:
  - 6.1 the formulas used;

<sup>1</sup> Fibre Input Methodologies Determination 2020, [2020] NZCC 21 (as amended). An unofficial consolidated version incorporating amendments to the determination as of 21 December 2021 is [available on the Commerce Commission website](#).

<sup>2</sup> Fibre Input Methodologies Determination 2020 (consolidated December 2021).

<sup>3</sup> The input methodologies require us to make the determinations for all regulated fibre service providers other than Chorus within one month of the start of the disclosure year for all disclosure years except for disclosure year 2022.

<sup>4</sup> We determine an ID WACC for Tuatahi First Fibre Limited (Tuatahi) and Northpower Fibre Limited (Northpower Fibre) in April each year as their disclosure years are 1 April to 31 March. We determine an ID WACC for Chorus Limited in January or February, as its disclosure year is 1 January to 31 December.

<sup>5</sup> Commerce Commission, [Guidelines for WACC determinations under the cost of capital input methodologies](#) (17 January 2023).

- 6.2 the values for WACC parameters which are fixed under the IMs; and
- 6.3 our methodology for determining the risk-free rate and average debt premium.

## Further details regarding the WACC estimates

### WACC parameter values for Enable

7. The parameter values used to generate the mid-point WACC estimates for Enable are summarised in Table 2 below.<sup>6</sup>

**Table 2: Values used to calculate WACC estimates**

<b>Parameter</b>	<b>Estimate</b>
Risk-free rate	4.51%
Average debt premium <sup>7</sup>	1.50%
Leverage	29%
Asset beta	0.50
Equity beta	0.70
Tax adjusted market risk premium	7.5%
Average corporate tax rate	28%
Average investor tax rate	28%
Debt issuance costs	0.33%
Cost of debt	6.34%
Cost of equity	8.50%
Standard error of mid-point WACC estimate	0.0131
<b>Mid-point vanilla WACC</b>	<b>7.87%</b>
<b>Mid-point post-tax WACC</b>	<b>7.36%</b>

\*The numbers are rounded to two decimal points, except for the tax adjusted market risk premium and standard error of the mid-point WACC estimate.

<sup>6</sup> All parameter values except the estimate of the risk-free rate and the average debt premium are set in the Fibre IMs.

<sup>7</sup> Based on a Standard & Poor's target credit rating of BBB.

### Risk-free rate

8. The risk-free rate reflects the estimated bid yield to maturity on New Zealand government bonds with a term to maturity equal to the length of the regulatory period (three years).<sup>8</sup>
9. Our estimate of the three-year risk-free rate is based on data reported by Bloomberg for the three-month period ending 30 June 2023 in respect of the April 2025, May 2026 and April 2027 maturity bonds.
10. The daily data reported by Bloomberg is linearly interpolated, annualised (to reflect the six-monthly or quarterly payment of interest) and averaged to produce the estimate of a 4.51% interest rate on New Zealand government bonds with a three-year term to maturity, as estimated at 1 July 2023.<sup>9</sup>

### Average debt premium

11. The average debt premium of 1.50% is the historical five-year average of the debt premium values for the current debt premium reference year (DPRY) and the four previous DPRYs, as shown in Table 3 below. This is the same as the average debt premium input estimated in our WACC determination published in February 2023.<sup>10</sup>

**Table 3: Average debt premium for Enable (%)**

	DPRY 2019	DPRY 2020	DPRY 2021	DPRY 2022	DPRY 2023	Average
Debt premium	1.65	1.70	1.70	1.30	1.15	1.50

12. The DPRYs for all regulated fibre service providers start on 1 September and end on 31 August.<sup>11</sup> DPRY 2023 (the DPRY ending 31 August 2023), is the current DPRY for Enable as it contains the start of disclosure year 2024 (1 July 2023). The Fibre IMs

<sup>8</sup> The Fibre IMs define a regulatory period as “the relevant regulatory period for price-quality regulation applicable to a regulated provider as notified in a PQ determination”, where a PQ determination refers to a determination in which the price-quality path applicable to a regulated provider is set. The current regulatory period for Chorus under its price-quality (PQ) determination is three years which applies to all of the regulated fibre service providers for the purposes of determining the ID WACCs. We interpolate between the two closest bonds surrounding a three-year remaining term. This requires taking the yields of the bonds with a remaining term immediately before and after with a three-year term to maturity on that day. The term to maturity is constant but the bonds’ remaining terms to maturity decrease over time so the bonds immediately before and after the target term may change over time.

<sup>9</sup> Note that the target term to maturity for the risk-free rate and debt premium are different for the first regulatory period (the risk-free rate has a term equal to the length of the regulatory period, ie, three years for the first regulatory period, and the debt premium has a five-year term). For more information see the cost of debt section of the Fibre IM final reasons paper: Commerce Commission “Fibre input methodologies: Main final decisions – Reasons paper”, 13 October 2020, paras 6.81 to 6.264.

<sup>10</sup> Commerce Commission, Cost of capital determination disclosure year 2023 for information disclosure regulation, For Chorus Limited [2023] NZCC 1, 1 February 2023.

<sup>11</sup> Commerce Commission, Fibre Input Methodologies Determination 2020 (consolidated December 2021).

state that the calculation of the debt premium for a DPRY is estimated for each business day in the 12 months preceding the start of the DPRY. This means that for all the DPRYs we have used bond data starting on 1 September and ending on 31 August.

13. We estimated the debt premiums for DPRYs 2019 to 2023 in previous WACC determinations. The debt premium values for DPRYs 2019 to 2021 were estimated in the WACC determination for Chorus Limited's (Chorus) first price-quality path in July 2021. The debt premium value for DPRY 2022 was estimated in the ID WACC determination published on 1 February 2022 applying to Chorus, Enable, Tuatahi and Northpower Fibre.<sup>12</sup> The debt premium value for DPRY 2023 was estimated in the ID WACC determination published on 1 February 2023 applying to Chorus Limited.<sup>13</sup>
14. When determining the WACC estimates for Chorus' first price-quality path, we retrospectively estimated the historical debt premium estimates to calculate the five-year historical average. A summary of the data used and how we have applied our judgement in determining the debt premiums for DPRYs 2019 to DPRY 2021 are described in the Cost of capital determination for Chorus' first price-quality path.<sup>14</sup>

#### **Changes in the risk-free rate and debt premium over time**

15. The risk-free rate and the debt premium on bonds change over time. Changes in the risk-free rate and debt premium estimates are illustrated below. Figure 1 shows, as at 1 July 2023, changes over time in the:
  - 15.1 five-year risk-free rate from our historical determinations in other regulated sectors;
  - 15.2 three-year risk-free rate; and
  - 15.3 debt premiums and five-year average debt premiums on bonds rated BBB with a term of five years from our historical debt premium determinations.
